### The Brand

#### Vario Pool System

We, The Vario Pool System GmbH (VPS®), have been dedicated to the production and distribution of custom swimming pools of the highest quality for more than 30 years.

#### Quality

Constant inspections and assessments of new materials and possible installations ensure Vario Pool System its great innovative strength.

#### Technology

Our swimming pools are custom designed according to your wishes. Built-ins such as stairs, benches or loungers are molded directly into the pool basin.

#### Competence

It must be the combination of experience and the use of the highest quality materials that makes VPS® swimming pool unique.

## “High Quality” Swimming Pools in Series

Experience and competence are crucial for the sustainable quality of our VPS® swimming pools.

The swimming pools of the S-LINE series unite the advantages of a proven PVC hard surface with the possibility of cost-effective series production. Different lengths combined with four different stair variants leave nothing to be desired. Whether as an overflow basin or as a skimmer pool, S-LINE swimming pools are convincing.

The water-touching surface of the S-LINE series consists of welded 4mm thick rigid PVC panels. The FBE coating on the back serves for stabilization. A 90mm wall insulation made of PU foam reduces heat loss and

provides additional stability. The production in one piece, without joints and flange connections ensures tightness and excellent hygiene properties. It gets along without plasticizer. Moreover, the PVC used for VPS® pools is guaranteed to contain no cadmium and lead and is approved according to DIN 19643.

Another advantage is the absolute resistance of the PVC lining to all types of pool water, no matter if it is mineral, salt water or ozone-treated water, at temperatures up to 60°C.

## VPS® S-LINE-Series

Technology that inspires day after day. Swimming pools in series.

S-LINE swimming pools are delivered to the construction site in one piece, have to be aligned there and professionally backfilled after all pipe and electrical lines have been connected.

This guarantees the shortest construction times. All materials used for the pool body are free from organic decomposition and have a extremely long life. The high-quality 90 mm thick thermal insulation in the walls enables economical operation in all installation situations.

In addition to the usual KTW and KSW approvals, the PVC from VPS® also has a food safety certificate, a further plus for your health and well-being. To ensure safe entry and exit, all stairs are coated with an anti-slip coating and have a color-coded step marking. The optionally available roller shutter support edge for skimmer pools also offers increased security.

## Digital Construction 3D

We rely on a Digital Process.

VPS® takes care of the development, design and construction of all pool products. VPS® relies on experience, high level of expertise and a professional 3D software application. All design drawings go optimally into the production cycle and you, the customer, can make the most of the animated PDF documents and CAD files during the coordination phase.

Overflow Basins

Whether as an overflow pool or as a skimmer pool, S-LINE swimming pools are convincing. We would be happy to advise you on the possibilities.

# Step into the Pool.

## Die VPS® S-LINE SERIES

An investment in the future. The following advantages for you in detail:

- minimal own weight
- short installation time
- ready to connect
- absolute tightness
- guaranteed fixed price
- weather resistance
- extremely long life
- brine resistance
- resistance up to + 60° C
- chemical resistance
- resistance to ozone
- easy care
- contain no cadmium and lead
- without plasticizer

90mm wall insulation for an energetic optimal process.

VARIO POOL SYSTEM MANUFACTURES EXCLUSIVE AND CUSTOMIZED POOLS TO THE HIGHEST STANDARDS. QUALITY AND DESIGN COME FIRST.

## Pool Basin Installation

A Network of Professionals.

The swimming pool is moved by crane directly from our logistics vehicles. The basin is placed in the excavation pit or building opening and leveled. After the final inspection, the technical installation takes place. Here we rely on selected pool retailers and installation companies, with whom we work together across the board.

Your advantage: You always have specialists as contact personnel, because this is the only way a perfect process works. If necessary, we will also provide support on site. VPS® focuses on quality. From the beginning to the end. This is guaranteed and proven by our 30 plus years in the pool industry.

## Pioneers in the Pool Construction Industry.

- 100% true to size and fit
- absolute resistance with rigid PVC
